

YOU'RE EASY ON THE EYES...YOUR SCREENS SHOULD BE TOO

Founded by optometrist Dhruvin Patel, Ocushield makes the world's only medically certified blue light filtering products.

How does it work?

Ocushield blocks blue light which is emitted from your phone, tablet, or laptop by absorbing harmful blue rays, while keeping true colours. Whilst many of us are working from home, Ocushield products help to keep your eyes feeling fresh and provide added protection for kids' developing eyes, when spending time on screens.

Protect your eyes

From eye strain, and the bad things that go with it: headaches, fatigue, dry eyes, blurry vision

Improve your sleep

Blue light makes your body forget when it's bedtime. No blue light... doesn't

Protect your skin

Prevent fine lines and pigmentation changes on skin by blocking the blue

Protect your screen

Tough tempered glass - 5X stronger than traditional screen protectors

True Colours

No retro orange tinge (ahem, unlike night mode!)

Ocushield

Nice eyes...keep them nice

Why do I need blue light protection?

Research shows that blue light emitted from the screens of digital devices affects our eyes, sleep and skin.

Did you know that eye strain & headaches aka computer vision syndrome is the #1 occupational hazard of the 21st century?

Blue light disrupts the body's natural production of melatonin - a hormone that helps us fall asleep!

Over 100,000 eyes protected!

Ocushield's NEW iPhone 12 screen protector features self-cleaning technology! The technology breaks down viral structures - the same way anti-bacterial hand gel is used to prevent the spread of germs. With smartphones being 7x dirtier than a toilet seat and the continuation of the pandemic, you can keep swiping safely.

The full range of blue light filtering products includes...

Smartphone

iPad

Monitor

MacBook

Glasses

Lamp

Launching in Nordstorm, HSN and Best Buy soon!

"This has genuinely stopped my headaches and eye strain. It doesn't affect the appearance of colours and I would highly recommend"
