VERSELAB MV-1 UPDATES

The Version 1.8 update for VERSELAB MV-1 adds a host of requested features to your instrument.

New functions include undo/redo plus clip import. Clip compatibility between the MC-707, MC-101, and VERSELAB MV-1 means you can load clips straight from an SD card, then save and share between units or with other MC and VERSELAB users. There are also three brand-new MFX to embellish your sound—Exciter, Phonograph, and JD Multi—as well as support for pitch bend, hold, and other MIDI CC recording options.

Additionally, Version 1.8 includes a powerful random tone designer for quickly creating interesting sounds from a variety of algorithms. The update also adds another much-requested feature: vocal take panning. And these are just the beginning.

Find more under the hood when you download the Version 1.8 update.
