TurboSonic™

Equipped with Turbo Sonic technology, the T1 Pro employs a precisely engineered bass-reflex design to optimize the phase of low-frequency sound waves. The Yaber T1 Pro delivers deeper, more impactful bass with low-frequency extension reaching 55Hz. This technology enhances sound wave efficiency and volume output, ensuring clear, balanced, and full-bodied audio without the need for higher volume levels. Regardless of room size, Turbo Sonic guarantees an immersive, high-quality bass experience. In short, it delivers powerful, resonant bass and superior clarity, setting it apart from conventional audio systems.
